Please find below and/or attached an Office communication concerning this application or proceeding.

Office Action Summary

Application No.

09/837,388

Applicant(s)

LEE ET AL.

Examiner

Michael Cleveland

Art Unit

1762

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 30 December 2003.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 9-21 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 9-21 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
2. ☐ Certified copies of the priority documents have been received in Application No. _____.
3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

Attachment(s)

- 1) ☒ Notice of References Cited (PTO-892)
- 2) ☐ Notice of Draftsperson's Patent Drawing Review (PTO-948)
- 3) ☐ Information Disclosure Statement(s) (PTO-1449 or PTO/SB/08)
Paper No(s)/Mail Date _____.
- 4) ☐ Interview Summary (PTO-413)
Paper No(s)/Mail Date. _____.
- 5) ☐ Notice of Informal Patent Application (PTO-152)
- 6) ☐ Other: _____.

DETAILED ACTION

Election/Restrictions

1. Claims 1-8 are withdrawn from further consideration pursuant to 37 CFR 1.142(b), as being drawn to a nonelected invention, there being no allowable generic or linking claim. Applicant timely traversed the restriction (election) requirement in Paper No. 5.

Definitions

2. "Letterpress" is defined by Merriam-Webster's Collegiate Dictionary, 10 edn., as "the process of printing from an inked raised surface esp. when the paper is impressed directly on the surface" (in contrast to "intaglio": "printing (as in die stamping and gravure) done from a plate in which the image is sunk below the surface"). "Flexography" is defined as "a process of rotary letterpress printing using flexible plates and fast drying inks".

Claim Rejections - 35 USC § 112

3. The new claim terminology "applying an electroluminescent material to *each* land of the convex portions of the molding plate" (emphasis added by Examiner) is not literally supported by the specification as originally filed nor by the supporting document. However, a review of the prior art indicates that one of ordinary skill in the art would have been reasonably apprised that on a printer with convex and concave portions where the convex portions carry the ink (letterpress or flexographic printing processes), that each convex portion is inked to convey ink to the substrate. See, e.g., Wright '081, Fig. 1, and col. 3, lines 34-40. Thus, one of ordinary skill in the art would have instantly envisioned that each convex land of the printer is inked.

Accordingly, no rejection under 35 USC 112, 1st paragraph is applied to the current claims.

Claim Rejections - 35 USC § 103

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

5. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various

Art Unit: 1762

claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

6. Claims 9 and 17 are rejected under 35 U.S.C. 102(e) as being anticipated by Pei et al. (U.S. Patent 5,682,043, hereafter '043) in view of Wright (U.S. Patent 3,661,081, hereafter '081) Ireton (U.S. Patent 4,611,539, hereafter '539) is cited as evidence.

'043 teaches a method of patterning an electroluminescent (EL) display (cols. 1-2), comprising:

flexographic printing a semiconductor ink (col. 10, lines 14-28), which is the light-emitting layer (col. 7, line 13-col. 9, line 28).

Ireton '539 teaches that flexography is understood in the art to mean providing a flexible printing plate (i.e., a molding plate) adhered to (i.e., disposed on) a plate cylinder or printing roller (i.e., a molding roller), said molding plate having a raised image (i.e., convex and concave portions, with the convex portion (the raised image) defining lands), applying the ink to the raised portion (i.e., each land of the convex portion of the molding plate) and printing the ink from the molding plate onto a substrate by rotating the roller so that the land on each convex portion contacts the substrate.

'043 (and the definition given by Ireton) does not explicitly teach a plurality of convex and concave portions. However, '043 does indicate that different inks may be desired in different locations (col. 7, lines 12-20). Wright '081 illustrates a flexographic process and makes it clear that there may be a plurality of convex printing portions (5) and concave non-printing portions (6). Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to have used a flexographic plate with a plurality of convex and concave regions with a reasonable expectation of success because '043 indicates that areas with different properties are desired and because '081 teaches that a method of depositing inks in desired areas is to have a plurality of convex and concave regions.

Art Unit: 1762

Claim 17: '043 teaches that the polymer may be applied in solution (col. 10, lines 14-17).

Claim 18: '081 teaches that the ink may be supplied to the convex portions of the flexographic roller by rotating it and a supply roller (9) (Fig. 1, col. 3, lines 41-49).

7. Claim 10 is rejected under 35 U.S.C. 103(a) as being unpatentable over Pei '043 in view of Wright '081 as applied to claim 9 above, and further in view of Himeshima et al. (U.S. Patent 6,592,933, hereafter '933).

Claims 10: '043 teaches the features of claim 9, as discussed above. It teaches that different materials may be printed in different locations, for example, to apply different colors (col. 7, lines 12-20). It does not explicitly teach that the colors are red, blue, and green. However, the Examiner takes Official Notice that it is notoriously well known in the art of electroluminescent devices to use red, green, and blue as the colors because red, green, and blue light can be combined to create any color of light. See, for example, '933, col. 5, lines 22-26.

8. Claims 11-16 and 20 are rejected under 35 U.S.C. 103(a) as being unpatentable over Pei '043 in view of Wright '081 and Himeshima '933 as applied to claim 10 above, and further in view of Shinoda (U.S. Patent 5,674,553, hereafter '553).

'043 teaches the features of claim 9, as discussed above. It teaches that different materials may be printed in different locations, for example, to apply different colors (col. 7, lines 12-20). It does not explicitly teach the use of barrier ribs between pixels. However, the Examiner takes Official Notice that it is notoriously well known in the art of electroluminescent devices to use barrier ribs between pixels of different colors in order to provide contrast between the pixels. See, for example, '933, col. 9, lines 34-37.

'933 does not explicitly teach that the barrier ribs are between pixel electrodes on which the EL material is deposited. However, '553 teaches an alternate arrangement for spacers and EL layers of EL devices. '553 teaches that pixel electrodes (22) may be formed between barrier ribs (29). See Fig. 20 and 22C. The selection of something based on its known suitability for its intended use has been held to support a *prima facie* case of obviousness. *Sinclair & Carroll Co. v. Interchemical Corp.*, 325 U.S. 327, 65 USPQ 297 (1945). See MPEP 2144.07. Therefore, it

Art Unit: 1762

would have been obvious to one of ordinary skill in the art at the time the invention was made to have used the method of '043 and '081 to have printed pixels on electrodes between barrier ribs because '553 teaches that such is an operative formation for particular EL devices.

Claims 12 and 20: The barrier ribs of '553 form striped boundaries between pixels.

'933 teaches alternate arrangements for spacers and EL layers of EL devices.

Claim 13: '933 teaches the use of barrier ribs comprising first spacers (3) and second spacers (4) (col. 9, lines 1-20). '933 teaches that an upper portion of the barrier ribs (3) may overlap the edge of pixel electrodes (2) (See Fig. 14) to form an inter-layer insulation layer (col. 9, lines 13-15). Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to have used overlapped the pixel electrodes of '504 with an upper portion of its barrier ribs 5 because '933 indicated that such a configuration would have advantageously provided an inter-layer insulation layer.

Claim 14: '553 teaches that the height of the barrier rib is larger than the combined thickness of the EL material and pixel electrode. See Fig. 20.

Claims 15-16: '933 teaches a list of known materials for spacers in EL devices. The spacers include glass (SiO_2) and polyimide (col. 9, lines 21-46).

9. Claims 19 is rejected under 35 U.S.C. 103(a) as being unpatentable over Pei '043 in view of Wright '081 as applied to claim 9 above, and further in view of Mourrellone (U.S. Patent 4,542,693, hereafter '693).

'043 and '081 teach the features of claim 18, as discussed above. '081 teaches that the amount of ink on the supply roller may be controlled, but the references do not explicitly teach causing the EL material to have a uniform thickness on the supply roller.

'693 teaches for a device comprising a letterpress (col. 1, lines 1-16) ink cylinder (T) and supply roller (A) that the provision of an equalizing roller (9) that provides an ink layer of uniform thickness on supply roller (A) (claim 8) advantageously improves the regularity of ink application and avoids the formation of undesired stripes (col. 7, lines 10-13).

Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to have caused the EL ink of '504 to have had a uniform thickness on the supply roller by using the equalizing roller of '693 because '693 teaches that such an equalizing

Art Unit: 1762

roller would have improved the regularity of the ink application and avoided the formation of undesired stripes.

10. Claim 21 is rejected under 35 U.S.C. 103(a) as being unpatentable over Pei '043 in view of Wright '081, Himeshima '933, and Shinoda '553 as applied to claim 11 above, and further in view of Nagayama et al. (U.S. Patent 5,701,055, hereafter '055).

'043, '081, '933, and '553 are discussed above, but do not explicitly teach that the barrier ribs are in the form of a matrix. However, '055 teaches an alternate arrangement for spacers and EL layers of EL devices. '055 teaches that pixel electrodes (22) may be a matrix between pixels. See Figs. 1 and 19. The selection of something based on its known suitability for its intended use has been held to support a *prima facie* case of obviousness. *Sinclair & Carroll Co. v. Interchemical Corp.*, 325 U.S. 327, 65 USPQ 297 (1945). See MPEP 2144.07. Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to have used the method of '043 and '081 to have printed pixels on electrodes between a matrix of barrier ribs because '055 teaches that such is an operative formation for particular EL devices.

Response to Arguments

11. Applicant's arguments with respect to the rejection(s) of claim(s) 9-21 under 35 USC 103 have been fully considered and are persuasive based on Applicant's perfection of foreign priority. Therefore, the rejection has been withdrawn. However, upon further consideration, a new ground(s) of rejection is made in view of the new art cited above.

12. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Michael Cleveland whose telephone number is (703) 308-2331. The examiner can normally be reached on 8-5:30 M-F, with alternate Mondays off.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Shrive Beck can be reached on (703) 308-2333. The fax phone numbers for the organization where this application or proceeding is assigned are (703) 306-3186 for regular communications and (703) 306-3186 for After Final communications.

Art Unit: 1762

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is (703) 308-0661.

A handwritten signature in black ink, appearing to read 'Michael Cleveland', written in a cursive style.
